Reporting of Losses

The value of the information produced is directly related to the accuracy of the information provided on the first report of loss. The data you feed to United Heartland on the front-end is coded for input to our loss system. If the information is not reported correctly, then the loss information generated will not be as complete or as accurate as desired. A combined effort between you and United Heartland will ensure that quality loss runs are generated.

Workers’ Compensation

- What was the Incident (Accident) **Type**, e.g., fall from, caught in, struck by?
- What was the Claimant **Source** of the injury, e.g., chemicals, platform/scaffold, machinery?
- What was the Claimant **Nature** of the injury, e.g., chemical burns, laceration, strain?
- What was the **Body Part** affected, e.g., hand, back (lower), foot?

Example: Our employee fell twenty feet from a **scaffold** and fractured his left **arm**.
